

This Carbon Reduction Plan is set out below in accordance with the UK Government Cabinet Office requirements following PPN 006: Taking account of Carbon Reduction Plans in the procurement of major government contracts. This Carbon Reduction Plan reflects Camurus' Greenhouse Gas Reduction and Renewable Energy Program and has been prepared specifically to meet the NHS tender requirements set out by the UK Government Cabinet Office. This information is also included and continuously updated in the Camurus Annual Sustainability Report. To access the report and other sustainability related information refer to www.camurus.com/sustainability.

Carbon Reduction Plan

Supplier name

Camurus Ltd

Publication date

04.03.2026

Commitment to achieving net zero

Camurus Ltd, as part of Camurus AB (Parent Company) is committed to achieving Net Zero emissions by 2045. The Carbon Emissions and reductions goals described below are reported and prepared at the Parent Company level. Camurus Ltd is wholly owned by Camurus AB, and, as such is bound by the commitments to reach Net Zero emissions by 2045.

Baseline emissions footprint

Baseline emissions are a record of the greenhouse gases that have been produced in the past and were produced prior to the introduction of any strategies to reduce emissions. Baseline emissions are the reference point against which emissions reduction can be measured.

Baseline year: 2023 for Scope 1 and Scope 2 emissions; 2024 for Scope 3 emissions

Additional details relating to the baseline emissions calculations:

All Camurus' Greenhouse Gas inventories are calculated based on the Greenhouse Gas Protocol. The first greenhouse gas (GHG) inventory for Camurus has been carried out in 2023 but did not include all Scope 3 categories. The inclusion of all relevant categories was completed in 2024. The company's climate goals were initially set in 2023 with a baseline for Scope 1 and Scope 2 (2023). The company's Scope 3 goal has a baseline of 2024, reflecting the comprehensive GHG inventory from that year.

When calculating total emissions for baseline year emissions (see below), Scope 2 market-based emissions were used. The total is calculated by adding baseline year Scope 1 and Scope 2 emissions (from 2023), to baseline year Scope 3 emissions (from 2024).

Baseline year emissions:

Emissions	Total (tCO2e)
Scope 1 (2023)	159
Scope 2 (2023)	17 (market-based); 12 (location-based)
Scope 3 (2024) (included sources)	10,081 (GHG Protocol Scope 3 categories: 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.9, 3.12)
Total emissions	10,257 (using Scope 2 market-based)

Current emissions reporting

Reporting year: 2024	
Emissions	TOTAL (tCO2e)
Scope 1	116
Scope 2	25 (market-based); 19 (location-based)
Scope 3 (included sources)	10,081 (GHG Protocol Scope 3 categories: 3.1, 3.2, 3.3, 3.4, 3.5, 3.6, 3.7, 3.9, 3.12)
Total emissions	10,222 (using Scope 2 market-based)

Emissions reduction targets

In order to continue our progress to achieving net zero, we have adopted the following carbon reduction targets.

By 2035: Reduce Scope 1 and 2 greenhouse gas emissions by at least 50% (from 2023 baseline)

By 2035: Reduce selected Scope 3 greenhouse gas emissions (by at least 40% (from 2023 baseline)

By 2045: Net zero greenhouse gas emissions (Scope 1, 2 and 3). The remaining greenhouse gas emissions that cannot be reduced will be offset in 2045 and beyond

Carbon reduction projects

Completed carbon reduction initiatives

The following environmental management measures and projects have been completed or implemented since the 2023 baseline.

List of actions to reduce greenhouse gas emissions and achieve carbon reduction goals implemented or completed since 2023:

- Purchase of green energy for use within company operations globally – equated to a 51% reduction (6.6 tCO2e) in emissions from electricity used in offices between 2023 and 2024
- Purchase of renewable fuels (sustainable aviation fuel – SAF; and biodiesel – HVO) for transportation of products by road and air freight – since 2023 this has had an aggregated impact of reducing emissions by 292 tCO2e.
- Relocation of Global Headquarters to LEED Gold certified building with reduced energy use – equated for a reduction in energy use of 44% or 392 MWh which translates to a carbon footprint saving of 2.7 tCO2e
- Transition of vehicle fleet from combustion engine cars to electric engine cars
- MyGreenLab certification (highest level – Green, received 2025) for Camurus laboratories. For more information about MyGreenLab see [My Green Lab Certification: The World’s Most Trusted Green Lab Certification.](#)

- Company cofinancing of employees commuting using fossil free public transport – commuting carbon emissions intensity per employee reduced by 17% from 2024 to 2025
- ISO 14001 certification process commenced in January 2026
- Third-party assurance of greenhouse gas inventory March 2026

Future carbon reduction initiatives

In the future we hope to implement further measures such as:

- ISO 14001 certification planned Q2 2027
- Continued purchasing of renewable energy and sustainable fuels

Declaration and sign off

This Carbon Reduction Plan has been completed in accordance with PPN 006 and associated guidance and reporting standard for Carbon Reduction Plans.

Emissions have been reported and recorded in accordance with the published reporting standard for Carbon Reduction Plans and the GHG Reporting Protocol corporate standard¹ and uses the appropriate government emission conversion factors for greenhouse gas company reporting.²

Scope 1 and Scope 2 emissions have been reported in accordance the GHG protocol and the required subset of Scope 3 emissions have been reported in accordance with the published reporting standard for Carbon Reduction Plans and the Corporate Value Chain (Scope 3) Standard.³

This Carbon Reduction Plan has been reviewed and signed off by the Executive Board of Directors for Camurus Ltd and signed by Camurus AB's CEO and President Fredrik Tiberg.

Signed on behalf of the supplier:

Fredrik Tiberg
